PROFILE

Backend-leaning Full Stack Developer with experience designing and deploying distributed systems, event-driven pipelines, and scalable APIs across cloud platforms. Skilled in Python, Go, and AWS, with a focus on performance optimization, cost reduction, and long-term maintainability. Currently exploring LLMs and AI agents to enhance product capabilities and improve engineering workflows.

EDUCATION

B.Tech Birla Institute of Technology, Mesra Ranchi	2020 - 2024
Computer Science and Engineering	8.72/10 GPA

WORK EXPERIENCE

Only Much Louder Software Development Engineer 1 Bangalore	June, 2024 - Present
- Built and deployed containerized Machine Learning microservice (Python, Transformers, Docker) for content classification, achieving 85% accuracy and ensuring brand safety for 100M+ creators. - Implemented a production monitoring infrastructure by configuring Slack and email alerting for AWS Lambda exceptions, leading to a significant reduction in mean time to detect (MTTD) by 60% and improved incident response. - Refactored and modernized a legacy campaign analytics service (2+ years old) using Python and AWS EC2, integrating advanced metrics aggregation for all creators and content pieces, interactive timeline visualizations, and bulk import capabilities. - Enabled distributed job orchestration via AWS SQS, supporting real-time KPI computation and scalable CSV processing. - Engineered fault-tolerant CI/CD pipelines for Amazon Elastic Container Service (ECS) and Amazon Elastic Container Registry (ECR), ensuring zero-downtime deployments across 6+ microservices. - Designed and integrated UserCheck and onboarding APIs with contract-based access controls and email validation logic, blocking spam/temporary users and enabling a secure self-serve flow that boosted qualified client onboarding by 18%. - Developed custom Shopify GraphQL API abstractions to enable creator-brand barter campaigns, streamline e-commerce integration, and drive measurable ROI tracking, contributing to a 25% increase in campaign engagement and adoption. - Centralized logging and monitoring across services, reducing average bug resolution time by 35% and boosting engineering velocity. Mentored 2 interns in backend architecture, code quality, and deployment, guiding them to deliver independently shipped features.	
Only Much Louder Software Engineer Intern Bangalore	January 2024 - May 2024
- Architected and administered a high-performance WebSocket service for real-time, bidirectional in-app messaging, cutting latency by 85% and replacing inefficient polling. - Resolved 80%+ of critical production bugs via root cause analysis and debugging, collaborating with product, QA, and client teams to drive resolution and platform stability. - Optimized creator import workflows by reengineering the OCR pipeline using Go routines and parallel processing, achieving a 90% reduction in processing time and boosting data ingestion throughput.	
Foodorich Software Developer (Freelance) Remote	October 2023 - December 2023
- Led end-to-end development of three production-grade Flutter apps (Delivery Partner, Restaurant, User), delivered in under 2 months. - Architected and deployed intuitive, high-performance mobile UIs with robust state management (provider), resulting in a 40% increase in user retention and customer engagement. - Configured real-time push notifications (Socket.io), geolocation services, and secure payment gateways (PhonePe), enabling seamless end-to-end user experiences and supporting 1,000+ monthly transactions.	
GEP Worldwide Software Engineer Intern Navi Mumbai	May 2023 - July 2023
- Spearheaded development of a high-throughput data export utility, enabling seamless transformation of 40GB+ datasets from Azure Databricks into Excel-compatible formats for enterprise consumption. - Optimized data pipelines and reporting workflows, reducing infrastructure costs by 12% and accelerating insights by 50% across 20+ international markets.	

TECHNICAL SKILLS

Languages: Python, Go, C++, Shell, SQL, Dart, Node.js, React.js
Frameworks & Tools: Django, AWS, REST, Docker, Serverless, RAG, LangChain, Google ADK, MongoDB, PostgreSQL, Redis, Microservices
Key Competencies: Scalable Architecture, Performance Tuning, API Design, AI System Integration, Team Collaboration

PROJECTS

Software Bug Assistant
- Built an LLM-based agent with Google ADK to triage bugs via natural language, reducing manual triage effort by 50%. - Incorporated internal tickets (PostgreSQL), GitHub MCP issues, StackOverflow, and Google Search for comprehensive context. - Used RAG + function-calling to suggest root causes, identify related fixes, and automate priority updates, cutting response time by 40%.
Sales Forecast
- Developed a SARIMAX-based forecasting model, improving sales prediction accuracy by 20% for business insights. - Orchestrated a GPT-3.5-powered chatbot and data pipeline (MongoDB, Flask, Angular) to streamline analytics for 10,000 data points per hour.
